COMFORTage Open Call n°1 is coming!

COMFORTage is excited to announce its first Open Call for stakeholders to join the CCF. This call invites startups, SMEs, and other relevant stakeholders to collaborate in the development of technology components that can be integrated into AI-powered healthcare solutions.

We invite you to apply in any of the following thematic areas:

Topic #1: Dementia and Frailty Service Delivery Models for affected patients and their carers, by **EHTEL**: It will be focused on interventions to support people already affected by frailty and dementia and their carers. The domain of dementia and frailty is complex, and some traditional clinical pathways may not be applicable for these cases as most of the efforts remain targeted at extending the period of autonomy and, to some extent, improving the quality of life.

Topic #2: Skills to facilitate the Service Delivery Models, by **DEPAN**: It underscores the essential enabling factors that contribute to the effective implementation of service delivery models within the context of dementia care. The focus is on fostering a skilled workforce equipped to navigate the complexities of modern healthcare environments, particularly in the realm of digital health technologies.

Topic #3: AI-based Prevention of Cognitive Decline, by **CERTH**: This thematic area concentrates on the development and implementation of strategies, tools, and technologies designed to prevent cognitive decline in individuals at risk of dementia. Emphasising the integration of AI and innovative solutions such as Virtual Assistive and Ambient Assisted Living (AAL), this theme aims to foster proactive approaches to cognitive health.
